PROFESSIONAL SUMMARY

DevOps Engineer with **2 years** of experience managing **CI/CD pipelines** using **Jenkins** across dev, non-prod, and production environments. Skilled in debugging pipeline failures, onboarding applications, and supporting deployments for **Java** and **.NET** systems. Hands-on with **AWS** (EC2, Auto Scaling, ALB), **Docker**, **Terraform**, and **Kubernetes** for infrastructure provisioning, container orchestration, and deployment automation.

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS) **Hyderabad, India**

DevOps Engineer Jan 2025 – Present

- Managed **15+ Jenkins pipelines** across dev, non-prod, and production environments, achieving **95%+ deployment success rate** through proactive debugging and failure resolution
- Onboarded **multiple applications** (UI, backend services, DDL/DML components) into CI/CD pipelines using **shared libraries**, reducing manual deployment steps by **75%**
- Integrated build and deployment workflows for **Java** (Gradle, Maven) and **.NET** applications, coordinating **20+ releases per quarter** across environments for timely delivery
- Collaborated with cross-functional teams to streamline build and release processes, reducing average pipeline failure resolution time by **55%** and improving release cadence from bi-weekly to weekly

PROJECTS

CI/CD Pipeline with AWS Deployment Sep 2025 – Nov 2025

- Designed end-to-end **Jenkins pipeline** automating build, code analysis, and deployment for a Java application: Git → **SonarQube** (SAST/SCA) → **Docker** build → **AWS EC2** deploy
- Containerized the application using **Docker**, enabling consistent behavior across development and production environments with secure credential management
- Troubleshot real-world issues including Docker permission errors, container networking conflicts, and pipeline failures — achieving **reliable, repeatable deployments** with minimal manual intervention

Terraform Infrastructure Automation May 2025 – Jun 2025

- Built reusable **Terraform configurations** to provision **EC2 instances** and security groups, reducing manual AWS resource provisioning by **65%**
- Managed infrastructure lifecycle using **Terraform state** and CLI commands (init, plan, apply, destroy), enabling faster and consistent environment setup

Kubernetes Container Orchestration Jul 2025 – Aug 2025

- Deployed containerized application on **Kubernetes** to simulate production-like orchestration; exposed services using **NodePort** and resolved pod-level and networking issues using **kubectl** debugging

SKILLS & TECHNOLOGIES

CI/CD & Build: Jenkins, GitHub Actions, Maven, Gradle, SonarQube, Veracode

Cloud & Infrastructure: AWS (EC2, ASG, ALB), Terraform, Docker, Kubernetes

Monitoring & Logging: AWS CloudWatch, Splunk

Development: Java, HTML, CSS, JavaScript, ReactJS, MySQL, Firebase, SQL Server

Tools & OS: Git, Linux, Bash Scripting, Jira

EDUCATION

Graphic Era University **Dehradun, India**

BTech in Computer Science & Engineering 2020 – 2024
